

# SafeBlood Graft Procedure™

by SafeBlood® Technologies

1-800-854-4855

## Past Medical Hx/Hx Present Illness:

57 y.o. male who presented with a very painful wound. 1 month prior, he was riding his 4-wheeler and fell off resulting in a "small scratch". The wound got infected and deepened. He had a sizable wound when he presented to his PCP. He prescribed abx and referred him to our office. We performed an OR debridement, partial primary closure, and application of autologous platelet gel. **Surgery date was 9-13-00.** The wound was very painful. **PMH:** epididymitis **MEDS:** doxycycline **ALLERGIES:** NKDA

Pt. underwent surgery on 9-13-00 involving I&D, partial closure, and application of autologous platelet graft. Pt. improved dramatically. Oral abx was not prescribed. After follow-up, patient applied daily dressings utilizing Panafil ointment until 10-30-00. No further treatment was required.
